| Question | Answers   | Extra information  | Mark   | AO<br>Spec reference |
|----------|---|--|--------|----------------------|
|          | I pent-1-ene  | Do not allow pentene   | 1      | AO2                  |
| 02.1     | II 2-methylbut-2-ene<br>III pent-2-ene                                  |  | 1<br>1 | 3.3.1.3              |
|          | Stereoisomers have the same structural formula                          |  | 1      | AO1                  |
| 02.2     | Have different arrangement of bonds in space                            | For 2 <sup>nd</sup> mark allow have different displayed formulae | 1      | 3.3.1.3              |
|          | Isomer III  |  | 1      | AO2                  |
| 02.3     |   |  | 1      | 3.3.1.3              |
| 02.4     | There is no free rotation about the C—C double bond.                    |  | 1      | AO1                  |
| 02.4     | On each carbon of the C—C bond, there are 2 different atoms or groups.  |  | 1      | 3.3.1.3              |
| 02.5     | Methylcyclobutane   |  | 1      | AO2<br>3.3.1.1       |
| 03.1     | Use the ideal gas equation  |  | 1      | AO2                  |
|          | $n = \frac{PV}{P}$  | Some evidence of using the                                       |        | 3.1.2.3              |
|          | RT  | equation is required   |        |                      |
|          | $n = \frac{1.01 \times 10^5 \times 85 \times 10^{-6}}{8.31 \times 450}$ |  | 1      |                      |
|          | = 2.2957 ×10 <sup>-3</sup> mol  | answer to 2 s.f.   | 1      |                      |
|          | $M_{\rm r} = m/n = 0.20/2.2957 \times 10^{-3} = 87 {\rm g \ mol^{-1}}$  |  | 1      |                      |
