## A Level AQA Physics

6 Force, energy, and momentum 1 - answers

| Question | Answers | Extra information | Mark | AO | Spec. reference |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 02.2 | Any one from: <br> - can identify anomalies <br> - check if results repeatable <br> - check precision of data <br> - shows that $g$ constant for different heights | Not simply more accurate | 1 | 3 | 3.1.2 |
| 02.3 | Suitable line of best fit drawn <br> Large triangle or coordinates seen on graph Gradient $=4.9 \pm 0.1$ |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | 2 | MS3.4 |
| 02.4 | $\begin{aligned} & \text { Use of } s=u t+\frac{1}{2} a t^{2} \text { and } u=0 \text { or } s=\frac{1}{2} g t^{2} \\ & \text { Gradient }=\frac{1}{2} g \\ & g=2 \times 4.9=9.8 \mathrm{~m} \mathrm{~s}^{-2} \end{aligned}$ | Must use the gradient to gain marks Allow e.c.f. from answer to 02.3 Range $=9.6$ to 10 | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{aligned} & 1 \\ & 2 \end{aligned}$ | 4.1.3 |
| 02.5 | Any one from: <br> - ball not released quickly <br> - centre of ball not falling through light gates <br> - parallax errors when measuring distance between light gates <br> - ball falling before reaching first light gate so $u$ not equal to 0 | Any sensible suggestion | 1 | 3 | 3.1.2. |
| 03.1 | Points plotted correctly (within $\pm \frac{1}{2}$ square) Smooth curve line of best fit drawn | Lose mark for one mistake | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 2 | MS 3.2 |
| 03.2 | Tangent on slope within first 3 seconds Gradient $=\frac{24-0}{18}=1.3 \mathrm{~m} \mathrm{~s}^{-2}$ | No marks if values from table used (allow between 0.8 and 1.9) | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 3 | MS 3.6 and 7 |
| 03.3 | $\begin{aligned} & \text { Thrust }=m a+m g=140000(a+g) \\ & =1.6 \times 10^{6} \mathrm{~N} \\ & \text { OR } \\ & W=m g=140000 \mathrm{~kg} \times 9.81=1373400 \mathrm{~N} \\ & F=m a=182000 \mathrm{~N} \\ & \text { Thrust }=1373400 \mathrm{~N}+182000 \mathrm{~N}=1.6 \times 10^{6} \mathrm{~N} \end{aligned}$ | Possible e.c.f. from answer to 03.2 (for both marks) | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 2 | 3.4.1.5 |

## Skills box answers

| Question | Answer |
| :--- | :--- |
| $\mathbf{1 ( a )}$ | mean values for $t$ are: $0.64,0.57,0.49,0.46,0.40,0.38$ |
| $\mathbf{1 ( b )}$ | gradient of graph $=4.8 \mathrm{~m} \mathrm{~s}^{-2}$, so $g=9.6 \mathrm{~m} \mathrm{~s}^{-2}$ | | A sheet of paper has a larger area than a tennis ball and so will experience greater air resistance - an upward force - than the ball at the same speed. |
| :--- |
| However, it has a much lower mass than the tennis ball, so the force acting downwards on it - its weight - will be much less. Therefore, the resultant |
| force acting downwards on the piece of paper is much smaller than that on the tennis ball, so it will not be accelerated as much. |
