## AQA GCSE Chemistry <br> Practice answers

| Question | Answers | Extra information | Mark | AO / Specification reference |
| :---: | :---: | :---: | :---: | :---: |
| 01.1 | 92 kJ | allow '-92 kJ' | 1 | $\begin{gathered} \mathrm{AO2} \\ \text { 4.6.2.2 } \end{gathered}$ |
| 01.2 | if a system is an equilibrium and a change is made to any of the conditions, the system responds to counteract the change |  | 1 | $\begin{gathered} \text { AO1 } \\ 4.6 .2 .4 \end{gathered}$ |
| 01.3 | it shifts to the right |  | 1 | $\begin{gathered} \mathrm{AO2} \\ \text { 4.6.2.7 } \end{gathered}$ |
| 02.1 | one $O$ atom should have 6 dots and 2 crosses and other should have 6 crosses and 2 dots. the O atoms should be sharing 2 dots and 2 crosses |  | 2 | $\begin{gathered} \mathrm{AO2} \\ \text { 4.2.1.4 } \end{gathered}$ |
| 02.2 | a reaction that transfers energy to the surroundings |  | 1 | $\begin{gathered} \text { AO1 } \\ \text { 4.5.1.1 } \end{gathered}$ |
| 02.3 | more $\mathrm{SO}_{3}$ is added - shifts to the left pressure is increased - shifts to the right temperature is increased - shifts to the left more $\mathrm{O}_{2}$ is added - shifts to the right |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \text { AO2 } \\ 4.6 .2 .5 \\ 4.6 .2 .6 \\ 4.6 .2 .7 \end{gathered}$ |
| 03.1 | methanol gas is the product in unsealed container, product would escape (into surroundings) therefore, forward reaction would continue (to produce methanol) or continue to completion |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \text { AO1 } \\ \text { 4.6.2.3 } \end{gathered}$ |
| 03.2 | Level 3: Three conditions identified with matching description of how the change will affect the position of the equilibrium. Full explanation of why change occurs provided. |  | 5-6 | $\begin{gathered} \text { AO1 } \\ \text { 4.6.2.4 } \end{gathered}$ |

## AQA GCSE Chemistry <br> Practice answers

| Level 2: At least two conditions identified with a matching |
| :--- | :--- | :--- | :--- |
| description of how the change will affect the position of the |
| equilibrium. Attempt at explanations given, with some accurate |
| points given. |$\quad$| 4.6 | 4.2 .5 |
| :--- | :--- | points given.

Level 1: At least one condition identified, thought description of
how the change will affect position not given, incorrect, or incomplete. No attempt at explanation provided.

## No relevant content

0

Indicative content
increasing total pressure:

- shifts the equilibrium to the right/results in a greater relative amount of product
- because there is a smaller number of molecules on this side of the equation

## decreasing temperature:

- shifts the equilibrium to the right/results in a greater relative amount of product
- because the reaction is exothermic in the reaction shown increasing the amount/concentration of the reactant:
- shifts equilibrium to the right/results in a greater relative amount of product until equilibrium is established again
- because there is a smaller number of molecules shown in the equation on the left and the concentrations of all substances will change until equilibrium is reached again
