## A Level OCR Chemistry

Chapter 26 - answers

| Question | Answers |  |  |  | Extra information | Mark | AO Spec reference |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1(a) | A - hydrogen bonding <br> B - permanent dipole- dipole forces |  |  |  | Allow van der Waal's forces | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \mathrm{AO2} \\ \text { 2.2.2k } \end{gathered}$ |
| 1(b)(i) | Add bromine water to solution of phenol |  |  |  | Allow: add neutral iron(III) chloride solution | 1 | $\begin{gathered} \text { AO1 } \\ \text { 6.1.1i } \end{gathered}$ |
| 1(b)(ii) | Bromine decolorised and white precipitate formed |  |  |  | White precipitate is essential/ neutral iron(III) chloride gives purple coloration | 1 | $\begin{aligned} & \text { AO1 } \\ & \text { 6.1.1i } \end{aligned}$ |
| 1(b)(iii) | $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{OH}(\mathrm{aq})+3 \mathrm{Br}_{2}(\mathrm{aq}) \rightarrow \mathrm{C}_{6} \mathrm{H}_{2} \mathrm{Br}_{3} \mathrm{OH}(\mathrm{s})+3 \mathrm{HBr}(\mathrm{aq})$ |  |  |  | No mark for iron(III) chloride equation | 1 | $\begin{gathered} \mathrm{AO1} \\ \text { 6.1.1i } \end{gathered}$ |
| 1(c) | $\begin{aligned} & A-40 s \\ & B-15 s \end{aligned}$ <br> The more polar A will be retained for longer on the polar stationary phase |  |  |  | Need both times for mark | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \text { AO1 } \\ \text { 6.3.1b } \\ \text { AO2 } \\ 6.3 .1 \mathrm{~b} \end{gathered}$ |
| 1(d) | $\begin{aligned} & \text { Total area of peaks }=A(1 / 2 \times 10 \times 3)+B(1 / 2 \times 10 \times 8) \\ &=55 \\ & A-27.3 \% \quad B-72.7 \% \end{aligned}$ |  |  |  | Give $\mathbf{2}$ marks if these answers are given | $1$ <br> 1 | $\begin{gathered} \text { AO3 } \\ \text { 6.3.1b } \end{gathered}$ |
| 2(a) |  | Carbon | Hydrogen | Oxygen |  |  | $\begin{gathered} \text { AO1 } \\ \text { 2.1.3c; } \end{gathered}$ |
|  | Number of moles | 58.88/12 = 4.91 | $9.80 / 1=9.80$ | $31.37 / 16=1.96$ |  |  |  |
|  | Relative number of atoms | $\begin{aligned} & 4.91 / 1.96=2.50 \\ & 5 \end{aligned}$ | $\begin{aligned} & 9.80 / 1.96=5 \\ & 10 \end{aligned}$ | $\begin{aligned} & 1.96 / 1.96=1 \\ & 2 \end{aligned}$ |  |  | 4.2.4f; |
|  | The empirical formula $=\mathrm{C}_{5} \mathrm{H}_{10} \mathrm{O}_{2}$ <br> From molecular ion peak; $M_{\mathrm{r}}=102$ = empirical formula mass <br> Therefore, molecular formula $=\mathrm{C}_{5} \mathrm{H}_{10} \mathrm{O}_{2}$ |  |  |  |  | 1 1 |  |

## Chapter 26 - answers

| Question | Answers | Extra information | Mark | AO Spec reference |
| :---: | :---: | :---: | :---: | :---: |
| 4(c) |   | 1 mark for mirror images <br> 1 for 3D representation <br> Allow $\mathrm{C}_{2} \mathrm{H}_{5}$ - for $-\mathrm{CH}_{2} \mathrm{CH}_{3}$ | 2 | $\begin{gathered} \text { AO2 } \\ 6.2 .2 \mathrm{C} \end{gathered}$ |
| 5(a) | 2-amino-4-methylpentanoic acid |  | 1 | $\begin{gathered} \text { AO1 } \\ \text { 4.1.1a } \end{gathered}$ |
| 5(b) | Leucine: five peaks Isoleucine: six peaks | Do not allow - they will give different numbers of peaks. | 1 | $\begin{gathered} \mathrm{AO} 2 \\ \text { 6.3.2a; } \end{gathered}$ |
| 5(c)(i) | I This refers to the proton on carbon-2 of the chain (next to COOH group) There are two chemically different protons on the adjacent carbon. So applying the $n+1$ rule it will split into a triplet. <br> The integration shows that it is just one proton <br> II There are six protons responsible for the peak <br> These protons are the two $-\mathrm{CH}_{3}$ (methyl) groups <br> They are split into a doublet spin-spin coupling with the CH proton on the adjacent carbon |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \\ & 1 \\ & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \text { AO3 } \\ \text { 6.3.2b } \end{gathered}$ |
| 5(c)(ii) | The proton responsible for this is the CH proton on carbon 2 of the chain It has one proton on the adjacent carbon atom and therefore is split into a doublet |  | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \mathrm{AO3} \\ 6.3 .2 \mathrm{~b} \end{gathered}$ |
| 5(c)(d) | They have very similar chemical structures <br> Therefore they will interact equally strongly with the stationary phase of the column or tlc plate and move with similar rate/speed | Allow - they will have very similar retention times | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \mathrm{AO2} \\ 6.3 .1 \mathrm{~b} \end{gathered}$ |
| 6(a) | 2-chloropropanoic acid $\left(\mathrm{CH}_{3} \mathrm{CHClCOOH}\right)$ and aluminium chloride (halogen carrier) | Do not accept just halogen carrier | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \text { AO2 } \\ \text { 6.1.1d } \end{gathered}$ |
| 6(b)(i) | Proton on C4 <br> Peak is due to one proton <br> Quadruplet due to spin-spin coupling with 3 protons on adjacent C5 |  | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | $\begin{gathered} \mathrm{AO3} \\ \text { 6.3.2d } \end{gathered}$ |

## A Level OCR Chemistry

## Chapter 26 - answers

| Question | Answers | Extra information | Mark |
| :--- | :--- | :---: | :---: |
| Spec reference |  |  |  |
| 6(b)(ii) | 2 protons <br> on C3 <br> Doublet due to spin-spin coupling with one proton on adjacent C2 | AO3 <br> 6.3 .2 d |  |
| 6(b)(c) | lbuprofen has ten carbons in different environments <br> The impurity has twelve carbons in different environments | 1 | 1 |

Skills box answers:
1 a) 2.18 (to 3 s.f.)
b) 4.45
c) 4.13
d) -32.0
e) 1.30
f) 0.477
g) 1.78

2 a) $-w=\log _{10} 3.2 \times 10^{-13}=-12.5 \therefore w=12.5$
b) $e^{x}=\frac{1250}{50}=25 \therefore x=\ln (25) \Rightarrow \therefore x=3.22$
c) $y-3=\log _{10} 316=2.50 y=3+2.5=5.5$
d) $7.50 e^{-\frac{1000}{z}}=1.37 \times 10^{-1}$
$e^{-\frac{1000}{z}}=\frac{1.37 \times 10^{-1}}{7.5}=0.018266 \ldots$.
$-\frac{1000}{z}=\ln 0.018266 . .=-4.003$
$\therefore z=-\frac{1000}{4.003}=250$
