## Chapter 12 Electrical circuits

| Question | Answers | Extra information | Mark | AO spec reference |
| :---: | :---: | :---: | :---: | :---: |
| 1(a) | Level 3 (5-6 marks) Clear explanation of method with correct diagram, clear instructions on how to control temperature and light intensity and clear analysis. <br> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. <br> Level 2 (3-4 marks) Some explanation of method with diagram and either some analysis or some control methods explained. <br> There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence. <br> Level 1 (1-2 marks) Limited explanation and diagram or limited analysis. <br> The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear. <br> 0 marks No response or no response worthy of credit. | Indicative scientific points may include: Method: <br> - Solar cell in series with ammeter and variable resistor <br> - Voltmeter in parallel with variable resistor (or solar cell) <br> - Change the resistance of the circuit using the variable resistance and record a series of voltage and current readings. <br> Control light intensity <br> - Use of lamp with shielding round solar cell (black card). <br> - keep the lamp at a constant distance <br> Control of temperature <br> - Turn light on for short periods when taking reading and leave to cool <br> - Place a clear container with water between the solar cell and light source. <br> Analysis: <br> - Plot a graph of voltage against current <br> - The $y$ intercept is the e.m.f <br> - the gradient is the internal resistance. | 6 max | $\begin{gathered} 4.3 .2 \\ 1.1 .1 \\ 4.3 .2 \\ \mathrm{AO} 3 \times 3 \\ \mathrm{AO} 2 \times 3 \end{gathered}$ |
| (b) | Any sensible suggestion <br> The emf depends on the light intensity/temperature so they can only quote a value for average conditions |  | 1 | $\begin{aligned} & 4.3 .2 \\ & \mathrm{AO} 3 \end{aligned}$ |
| (c) | recognising $\varepsilon=8.2 \mathrm{~V}$ |  | 1 | 4.3.2 |
