## Oxford Revise | AQA GCSE Maths Foundation| Answers

Chapter 3 Standard form

| Question | Answer | Extra information | Marks |
| ---: | :--- | :--- | :--- |
| 3.1 (a) | 156000000 |  | 1 |
| 3.1 (b) | 0.00802 |  | 1 |
| 3.2 (a) | $4.8 \times 10^{10}$ |  | 1 |
| 3.2 (b) | $7.03 \times 10^{-5}$ |  | 1 |
| 3.2 (c) | $9.5 \times 10^{7}$ |  | 1 |
| 3.2 (d) | $6.8 \times 10^{-5}$ | Any three in the correct order <br> Correct answer |  |
| 3.3 | $1.5 \times 10^{8}$ | Put all numbers either in standard or ordinary <br> form and then compare. <br> Order, biggest to smallest is: <br> $2.3 \times 10^{5}, 2.1 \times 10^{4}, 2200,0.21 \times 10^{4}$ | Converting at least two of the numbers correctly to an <br> Writing both numbers in the same form <br> Correct answer |
| 3.5 | The virus is $5 \times 10^{-8} \mathrm{~m}$, so it is smaller | 1 |  |
| 3.6 (a) | $6 \times 10^{2}$ | 1 | 1 |

| Question | Answer | Extra information | Marks |
| ---: | :--- | :--- | :--- |
| 3.6 (b) | $2 \times 10^{-4}$ |  | 1 |
| 3.6 (c) | $8 \times 10^{-2}$ |  | 1 |
| 3.6 (d) | $6 \times 10^{7}$ | No, he is not correct. <br> In order for a number to be written in standard <br> form, the number, $A$, multiplied by the power <br> of 10, must be such that $1.0 \leq A<10$ | Identified answer as wrong, and provides correct <br> explanation |
| 3.8 | $2.1 \times 10^{3}$ | The correct answer is $1.8 \times 10^{7}$ | 1 |
| 3.9 (a) | $\left(5 \times 10^{4}\right)+\left(6 \times 10^{5}\right)=50000+600000$ <br> $=650000$ <br> $=6.5 \times 10^{5}$ | Identified answer in ordinary form as 2100 <br> Correct answer (in standard form) | Converting the numbers in brackets to ordinary form <br> or the same power of 10 <br> Correct answer |
| 3.9 (b) | $\left(9 \times 10^{-3}\right)-\left(3 \times 10^{-4}\right)=0.009-0.0003$ <br> $=0.0087$ <br> $=8.7 \times 10^{-3}$ | Converting the numbers in brackets to ordinary form <br> or the same power of 10 <br> Correct answer | 1 |
| 3.9 (c) | $\left(2.1 \times 10^{8}\right) \times\left(3 \times 10^{-5}\right)=6.3 \times 10^{8-5}$ <br> $=6.3 \times 10^{3}$ | Converting the numbers in brackets to ordinary form <br> or the same power of 10 <br> Correct answer | 1 |

| Question | Answer | Extra information | Marks |
| ---: | :--- | :--- | :--- |
| 3.9 (d) | $\left(8.2 \times 10^{3}\right) \div\left(4.1 \times 10^{7}\right)=2 \times 10^{3-7}$ <br> $=2.0 \times 10^{-4}$ | Converting the numbers in brackets to ordinary form <br> or the same power of 10 <br> Correct answer | 1 |
| 3.10 (a) | $6.0 \times 10^{5}$ |  | 1 |
| 3.10 (b) | $3.0 \times 10^{5}$ |  | 1 |
| 3.10 (c) | $6.5 \times 10^{-3}$ | Correct first step, i.e. $\left(2 \times 10^{2}\right)^{2}=\left(4 \times 10^{2}\right)$ <br> Correct answer in standard form |  |
| 3.10 (d) | $3.5 \times 10^{-10}$ | $\left(2 \times 10^{4}\right) \times\left(2 \times 10^{2}\right)^{2}=\left(2 \times 10^{4}\right) \times\left(4 \times 10^{4}\right)$ <br> $=8 \times 10^{8}$ | 1 |
| 3.11 | Earth's diameter $=1.2742 \times 10^{7} \mathrm{~m}$ <br> Jupiter's diameter $=14.2984 \times 10^{7} \mathrm{~m}$ <br> While Jupiter's diameter, written this way is <br> not in standard form, it is written with the <br> same power of 10 as Earth's diameter. This <br> shows that Jupiter's diameter is <br> $(14.2984 \div 1.2742)$ times greater than Earth's, <br> which is closer to 10 times greater, not 1000 <br> times greater. | Converting Earth's diameter to standard form <br> Converting Jupiter's diameter to the same power of <br> 10 as Earth's <br> Correct conclusion and reason | 1 <br> 3.1 |

| Question | Answer | Extra information | Marks |
| ---: | :--- | :--- | :--- |
| 3.13 | $z=\frac{\left(2.5 \times 10^{8}\right)\left(4 \times 10^{7}\right)}{\left(2.5 \times 10^{8}\right)+\left(4 \times 10^{7}\right)}$ <br> $=\frac{10 \times 10^{15}}{2.9 \times 10^{8}}$ <br> $=34482758.62$ <br> $=3.45 \times 10^{7}(3$ sf $)$ | Numerator correct, or rewritten as $1 \times 10^{16}$ <br> Denominator correct or decimal equivalent <br> Correct final answer, in standard form, to 3 sf | 11 <br> 2 |
| 3.14 | No. A prime number, by definition, has exactly <br> two factors: itself and 1. The number 1 has <br> only one factor. |  | 1 |
| 3.15 (a) | $\frac{1}{16}$ |  | 1 |
| 3.15 (b) | 1 |  | 1 |
| 3.15 (c) | $\frac{27}{8}$ |  | 1 |
| 3.15 (d) | $\frac{3}{4}$ |  | 1 |
